The Everything Kids' Magical Science Experiments Book: Dazzle Your Friends And Family By Making Magical Things Happen!

Synopsis

Dazzle your friends and family with dozens of science tricks! Kids may not clamor to study science and physics, but they sure enjoy anything that has to do with slime, invisible ink and obtaining the ability to make things disappear. With *The Everything Kids' Magical Science Experiments Book*, kids will be able to bend the rules of time, space and logic by performing over 50 "magical" science experiments. Parents will love the fact that their kids are learning while having fun, by performing feats such as: Changing salt to sugar, Creating a real life genie in a bottle, Creating and writing with invisible ink, Making a person stay seated, just by using their pinky finger, Sealing a punctured balloon with a penny, Changing Mentos candy into soda. *The Everything Kids' Magical Science Experiments Book* is packed with 30 "magical" science-related puzzles and over 50 experiments that are sure to get kids excited about chemistry, science and even physics!

Book Information

Series: Everything® Kids

Paperback: 144 pages

Publisher: Adams Media (October 1, 2007)

Language: English

ISBN-10: 159869426X

ISBN-13: 978-1598694260

Product Dimensions: 8 x 0.4 x 9.2 inches

Shipping Weight: 5.6 ounces (View shipping rates and policies)

Average Customer Review: 4.0 out of 5 stars See all reviews (29 customer reviews)

Best Sellers Rank: #242,206 in Books (See Top 100 in Books) #158 in Books > Children's Books > Science, Nature & How It Works > Experiments & Projects #65300 in Books > Reference

Age Range: 7 - 12 years

Grade Level: 4 - 7

Customer Reviews

I bought this and the other *Everything Kids' Science Experiments* book and they are both great, this one the best. It has really neat experiments that my daughter (age 10) is excited about doing for her project and to wow her classmates and teacher, and the best part of all is they are SIMPLE and use EASY TO FIND items and things probably already on hand. I will be getting more books from the series.

This book is a go if your kids are old enough. Quite a few of the experiments would be less than appreciated by younger kids. As a lower elementary school teacher I bought this book to find great experiments to do the kids in my class. There are some fun ones, but most of them are a bit high for my kids.

We have both books from this author and both are outstanding. The activities in this book are entertaining for both our kids. Almost every activity involves a creative experiment with materials found around the house. There are follow up questions for many of the experiments that make them science fair appropriate. In general, though, the experiments in this book are good fun. It is interesting to see what can be done with science! This author has hit another home run!

As a high school science teacher, I am always looking for more great ways to introduce science to my preschool aged children. I think the experiments in here are fun, getting the kids interested in what is happening and does a good job of explaining the why's of the experiment and giving some quality follow up questions. The only reason I didn't rate the book a 5 star is because I wish it has some better pictures and way to present the material, but the content is great.

Please note this is for the Kindle version only. The hard copy version is still a go. None of the color or connect or depth experiments are active in the Kindle version -- at this price shame on the publishers. For future reference this significant difference should be prominently posted as I would have purchased the hard copy for my Grand-daughter's birthday. As it is, the experience has been a good learning tool: she, that not everything is perfect and I, that I need to verify rather than assume.

Purchased for my nephew and he loved making the experiments and on rainy days my sister-in-law gets the book out and they make some of the experiments. She likes it and that says a lot for her, she has her PhD in education!

I bought this for an eight year old boy and he was really excited about it. He tried a few (worked on them with an adult so it was good bonding time) and seemed to enjoy himself well enough. It was particularly helpful because we had him reading the experiments out loud to work on his reading skills and he was interested enough in doing the experiments so he kept at it even when he didn't necessarily understand everything.

this book had a lot good reviews, so i bought it for my 3 little sisters. they expected it to have fun experiments with citric acid or baking soda, but it was just a bunch of cheesy ones like raisins floating in soda, or a sting in a ice cube! not so magic
