your best prediction about 3D printing over the next five years? In the next five years we see 3D printing really affecting how we express ourselves creatively. From mini-me 3D printed selfies to 3D printed concepts and prototypes, there will soon be better and more user friendly access to this technology for everyone. The ability to take an idea into a personalized physical form will attract both inventors and customers. 3D printed medicine and medical aids will likely be a reality in five years as well. What is the strangest application you've yet encountered? In 3D printing, nothing is strange—just newly discovered! If we had to describe something that is amazing and unbelievable, we would have to point to 3D-printed organs and functional tissue. The ability to grow your own replacement tissue is amazing and unheard of in the history of medicine. Learn, Outsource, Research! Stay calm and print on. When you start to print or CAD a model, expect a learning curve and treat it like any other new skill. Go free. When learning CAD for the first time, first try free software like TinkerCad and learn the basic concepts. Outsource! Don't want to run a 3D printer? There are companies that will make it for you. Don't want to learn how to create a file? There are plenty of free models out there or paid services that will create one for you. Research before buying. There are many variables you will need to understand before choosing the one right for you. Don't forget to check out the manufacturer's forums to read comments about what people are saying about the company.
